

---

The post could be about how to download iso files onto a CD or DVD using BitTorrent. The post could also tell you what an ISO file is at the beginning so the reader will have an idea about what he/she is downloading.

Intro: Everyone knows that CDs and DVDs are old school, so think of all the space you'll save by only storing data digitally! How to convert your CD or DVD into an .iso file? Convert your disk into this format with these instructions, then download it straight from Bit Torrent! Step One: Open up your browser and use FileZilla to open up a FTP connection to the server containing your ISO files. Step Two: Transfer the ISO files via FTP from your computer to the server. Step Three: Once you've transferred all of your ISO file(s), open up BitTorrent and download them! Another article could be about how to use a particular ISO software, such as ImgBurn or XISO. The post could also tell you where to get the software from and how to set it up. A tutorial on how to use a program can be a good thing for beginners who need a step-by-step guide on the process, especially if it is complicated (but even if it is not).

Introduction: Computer operating systems are like music; they come in many different varieties. Fortunately, most of them are relatively easy to use, but some are considerably more complicated than others. One operating system that is fairly straightforward to use is Linux; it is also extremely powerful and flexible. However, not everyone wants or needs the power of Linux. This article will provide you with an introduction on how to install Ubuntu (Linux) on your computer without having to make any changes to your current operating system. The information contained in this tutorial will provide you with the basic steps on how to install Ubuntu without having any complications. Step One: If you are not familiar with Linux, it's important that you take the time to become familiar with the system before beginning this tutorial. It will also help if you have an interest in learning more about computers, since most of these steps will be technical in nature. There is a wealth of information on Linux available on the Internet, so don't hesitate to do further research about this operating system if necessary. Step Two: First things first. You need to download Ubuntu (Linux) onto your computer. Simply go to the Ubuntu website at [www.ubuntu.com](http://www.ubuntu.com), click on "Download Ubuntu" and follow the instructions on the website to download it onto your computer. Step Three: Once you have finished downloading it, open up your .iso file using a program that can open or view them (if you are not sure what type of file this is, don't worry about it). Once you see the page containing all of this information about Ubuntu, click on the box that reads "Burn Image". This box will be located below where it says "Save File".
